

Leader in Italy in the field of water treatment and disinfection using ultraviolet systems.

# UVStream<sup>®</sup>

- **UVStream** open-channel UV disinfection systems from **emiambiente** are designed by skilled workers.

- Thanks to its many achievements, the system is extremely reliable and high-performance.

We specialise in the design and construction of UV plants for the treatment of water: primary, process, civil and industrial wastewater.

- The modular design makes the **UVStream** system extremely flexible and adaptable to any water flow rate.

- Quick and easy maintenance thanks to the removability of the modules without lifting equipment.

# UVNemesys<sup>®</sup>

The latest generation of open channel disinfection systems with inclined lamps.

- With dimmable lamps it allows considerable energy savings during operation.
- It adapts to any existing installation thanks to the variability of the inclination of the lamps.

«Correct design is the basis of any good system»

- The industry's most advanced wastewater treatment solution.

- **UVNemesys** is equipped with a mechanical, electrically powered and PLC-controlled cleaning system.

- Thanks to the scrapers, consisting of rings and brushes, the system ensures effective cleaning of the lamps even in particularly dirty water.

# UVStream-C<sup>®</sup>

- UVStream-C for water from primary and secondary treatment.
- From medium-small to large flow rates
- The UVStream-C system is easy to assemble by connecting it to the treated water discharge pipes, easily adaptable to any local situation and has a very small footprint suitable for retrofitting the system.

«emiambiente the ideal partner for solving your water disinfection problems »

Completely made of stainless steel tubes.

«since 1994 emiambiente, the best UV disinfection specialists»

- The design of the reactors is aimed at maximizing durability and minimizing maintenance costs.
- The reactors are equipped at both ends with removable flanges for complete internal accessibility.
- The materials used are selected according to the types of stress they are subjected to: mechanical, electrical, hydraulic, environmental, etc.

- Our products are equipped with a new specific management program, specifically designed to take into account every variable influencing the operation of the lamps, and to provide the operator with a complete and easy diagnostic of all system parameters.

«Quality first of all»

## Activities:

- technical support for assembly
- complete assembly
- after-sales technical assistance with qualified personnel
- timely and scheduled maintenance
- multi-year technical service contracts for perfect efficiency
